

FCC Statement

This device complies with part 15 of FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction guide, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult a service representative for help.

Properly shielded and grounded cables and connectors must be used in order to comply with FCC emission limits. LifeWorks is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

Keyboard and Mouse Devices: Health Warning

Use of a keyboard or mouse may be linked to serious injuries or disorders. As in many activities, when using a computer you may experience occasional discomfort in various parts of your body. However, do not ignore symptoms such as persistent or recurring discomfort, pain, throbbing, aching, tingling, numbness, burning sensation or stiffness. Promptly see a qualified doctor, even if symptoms occur when you are not working at your computer.

There is general consensus among researchers that there may be many factors linked to the occurrence of these symptoms, including overall health, stress, physical condition and how a person positions and uses his or her body during work and other activities (including the use of a keyboard or mouse). The amount of time a person spends performing an activity may also be a factor.

If you have questions about how your own lifestyle, activities or physical condition may be related to these symptoms, see a qualified health professional.

system requirements

- Windows® 2000, XP or Windows Vista®
- USB port

setup

1 • verify package contents

2 • connect USB cables

3 • connect USB devices

► **note** The USB ports on your keyboard can be used to power any USB device that consumes less than 100 mA (milliamperes), including most digital cameras, card readers, keyboards, mice, MP3 players, thumb drives and many other handheld USB devices.

If you have two USB devices connected to your keyboard at the same time, your keyboard may need additional power. To provide more power to the keyboard USB ports, also connect the secondary USB connector directly to your computer.

► **note** USB devices that consume more than 100 mA—such as external drives, printers, scanners or fax machines—may not operate properly when connected through the keyboard.

4 • start using your new keyboard!

The buttons along the top of the keyboard give quick access to internet and media functions and applications.

troubleshooting

situation	try this
keyboard does not work	<ul style="list-style-type: none">• Ensure the main USB connector is properly connected to the computer.• Move the main USB connector to a different USB port.
a device connected to the keyboard does not work	<ul style="list-style-type: none">• Ensure the device is connected properly.• Connect both the main and secondary USB connectors to your computer.• Connect the device to the keyboard's other USB port.• Connect the keyboard to a USB 2.0 port on your computer if available (not a slower USB 1.1 port).
